

INTRODUCTION

Like the rest of the industry, the Philip Riley team are pleased that there is certainty in the industry again, however disappointed that the industry took such a haircut in order to make that happen (80% of respondents from our last Survey responded "NO" to the revised RET Deal). We recently gave an interview to Ecogeneration about what we feel this will mean to Employment opportunities in the industry and our view is that the Solar industry will remain consistent (Residential, C&I & Utility Scale, Sales & Corporate roles most commonly), the Wind sector will grow (OEM, Professional Services & Construction), and WtE (Engineering & Sales) & Energy Efficiency (Consulting & product Sales) will also see growth.

We also go on to discuss skills and qualification shortages, some of the challenges with a Renewable career path and an outlook over the next decade (so feel free to buy it, otherwise please contact us for more information).
