

Message from the Managing Director

Q3 was as busy as ever and a personal highlight was attending the Solar Power International conference in Las Vegas ([SPI 2017](#)) (and not just because it was in Vegas) and learning about the current state of the US Renewables Industry (with a bias towards Solar). This conference is the biggest in the US and expected over 18k participants (and having been there, it's easy to see how they would achieve those numbers). A summary of that trip was that the US has verdict on the Section 201 case which could impose tariffs in imported panels (some say a 30%+ increase), C&I Solar market is booming, like Australia the states are forging ahead with their own policies and objective and Storage is about to boom (ie things that we are experiencing here in Australia).

I'm pleased to announce that Phillip Riley is now officially opened in the US with 2 new members supporting local customers. PM me if you would like more information. Otherwise on the home front, Australia and the APAC region continue to sign many projects (Wind, Solar & Storage) which in turn provides ample opportunities for top talent in the market.

I will be chairing a session at the upcoming All Energy conference so please drop by, "Project Development 2: Looking at the skills needed to shape the industry internally and externally"
Thursday 12th October 2.55pm to 4.15pm.

Scott Robinson
Managing Director
Phillip Riley

CURRENT JOB OPPORTUNITIES
